PREFACE

The language laboratory, in various degrees of complexity, is over twenty years old, yet only recently has a great surge of interest been evident in Britain. The number of teachers, architects and administrators requiring information is increasing rapidly, but the information they seek may be in any one of hundreds of articles scattered in a wide range of periodicals.

Existing guides to this literature are generally small in extent and almost exclusively devoted to American material, much of it in periodicals difficult to obtain in this country.

The present bibliography has been compiled in an attempt to overcome the lack of a systematic, annotated guide including a significant quantity of British publications.

It is not intended to be a complete list and some deliberate exclusions have been made. Items discussing audio and visual aids without making precise reference to language laboratory techniques are an example. Writings on teaching machines are also excluded, as language laboratories are not teaching machines but teaching aids; nor does discussion of programmed learning normally include reference to language laboratories.

A large number of articles, particularly elementary descriptions, repeat information more adequately conveyed elsewhere and many such secondary sources have also been omitted. Beyond this, the omission of noteworthy material which the user might have expected to find is not deliberate and comments and suggestions for future editions will be welcomed.

Photographic copies of the items listed, within the terms of the Copyright Act, 1956, can usually be supplied. Prices per page are available on application.

City Librarian.

METHOD OF ARRANGEMENT

The bibliography is arranged in the following subject groups, within each of which books and periodical articles are listed alphabetically by author. There is an author index which refers to entries by means of their serial numbers.

- (i) Bibliographies.
- (ii) General and comprehensive accounts. Items which describe several aspects of laboratory method and use, or which are introductions to the whole subject.
- (iii) Teaching methods in the laboratory.
- (iv) The laboratory in industry and commerce.
- (v) Equipment. A list of articles describing equipment and its selection, and a separate list of the names and addresses of manufacturers.
- (vi) Materials for laboratory use. Articles describing course material and its use, and a list of distributors from whom courses may be obtained.
- (vii) Agencies, institutions and organizations.

Some books and articles are equally suitable for two or more subject groups. These have been included in one of the suitable groups, with references to them from the others. References take the form of lists of serial numbers at the end of subject groups.

A sample entry, with the various parts explained, is given below:

84 FRIEDMANN, H. The teaching of modern languages by the
CREDIF audio visual method. *Inc. Ling.* v.1, no. 3, Jul. 1962.
p.72-77. *bibliog.* (7). 405 II

An examination in relation to LL's and normal classroom facilities.
Notes of useful addresses and of equipment.

KEY:

Serial number. Author, title.

Abbreviated title of periodical, volume 1, issue number 3,
dated July 1962. Pages 72 to 77.

Bibliography listing 7 items.

Library call number

Annotation includes the abbreviation LL, used throughout for
language laboratory.

The presence of an asterisk in the place of the library call number
indicates an item not yet received at the time of going to press.
